GAMING REVENUE DASHBOARD

01

Project idea

Analyze subscription revenue trends, paid user behavior, churn dynamics and revenue recovery patterns.

Goal

Identify revenue growth drivers, user retention problems and monetization opportunities using Tableau dashboards.

Dataset & Business Metrics

02

Dataset

SQL database with gaming subscription payment records.

Main KPIs

- Monthly Recurring Revenue (MRR) • Paid Users • ARPPU
- New MRR
- Churn Rate • Revenue Churn Rate • Expansion vs Contraction MRR
- Revenue Recovery

Filters

- Payment Month • Language • Age • Device Type • Game Name

Revenue Growth Analysis & Trends

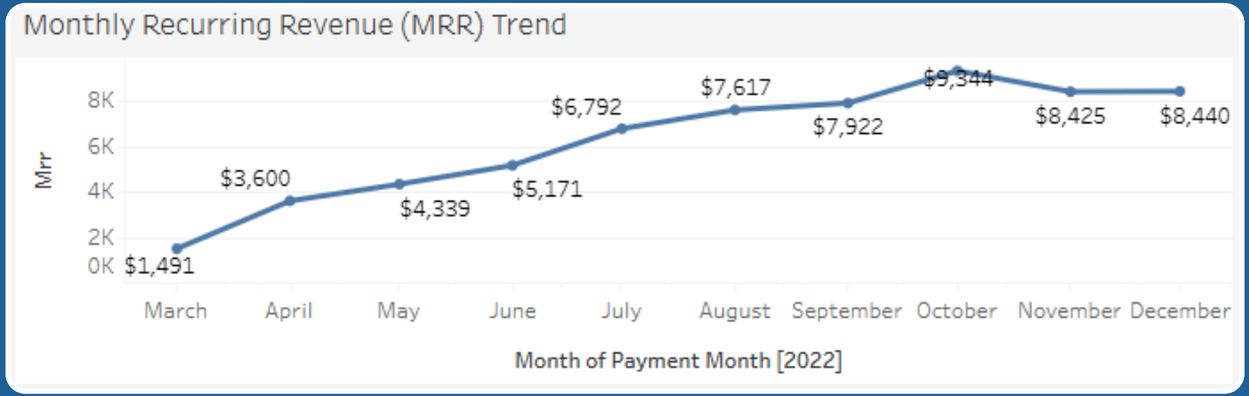
03

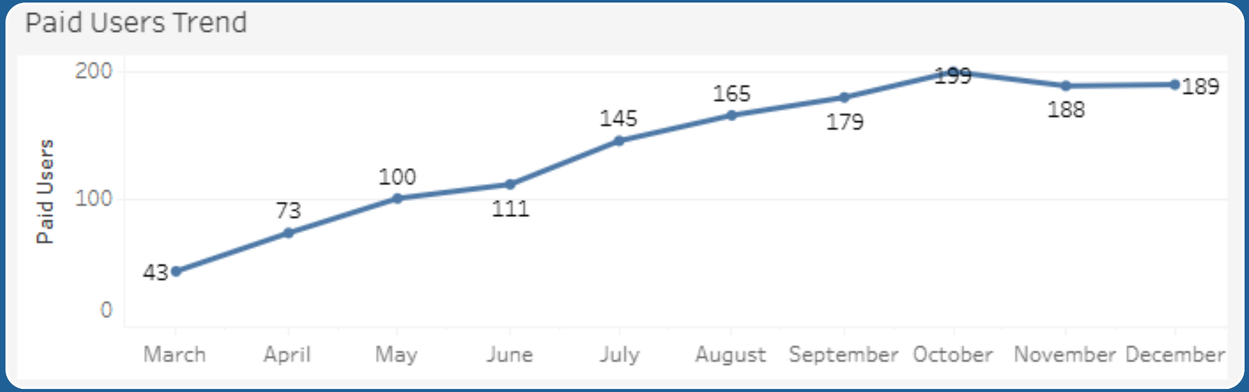
Key Insights

- MRR showed consistent monthly growth.
- Paid user count increased throughout the year.
- Revenue peaked during Q4 period.
- User growth directly impacted recurring revenue growth.

Key Observation

Growth momentum accelerated after mid-year.



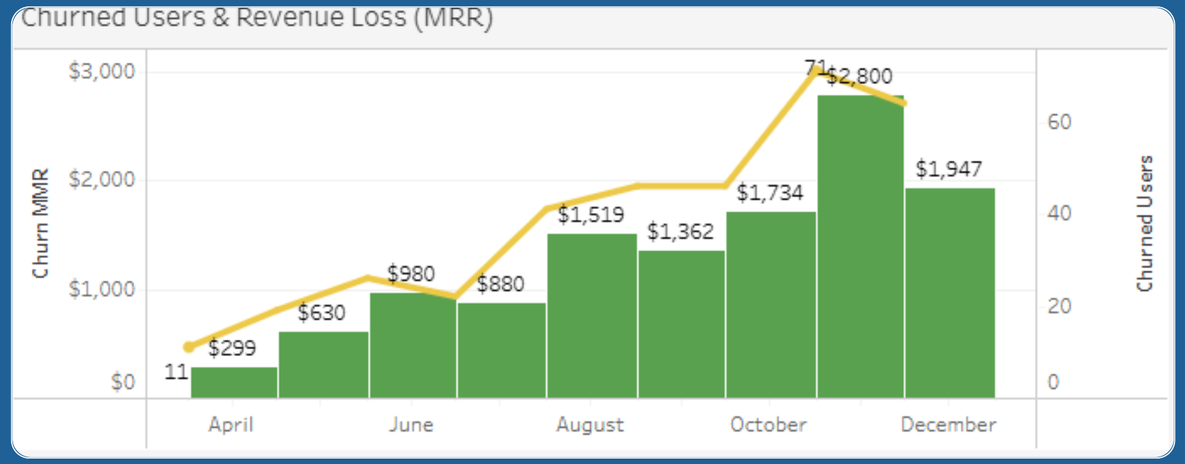


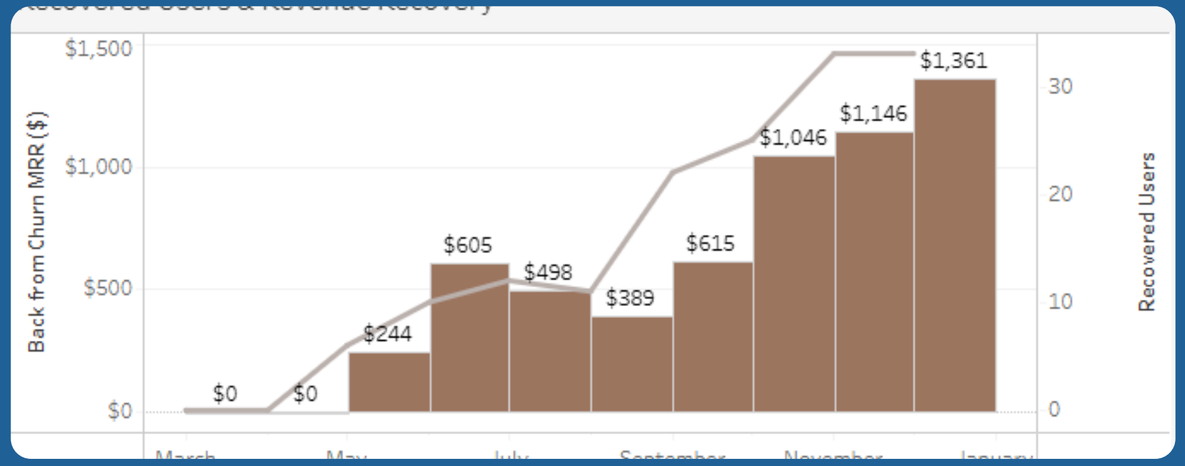
Churn & Revenue Lost Analysis & Trends

04

Key Insights

- Churned users increased significantly in late months.
- Revenue churn accelerated together with user churn.
- High churn periods created strong negative impact on net revenue.





Business Impact

Retention optimization became critical for sustainable growth.

Expansion vs Contractions Revenue Dynamics

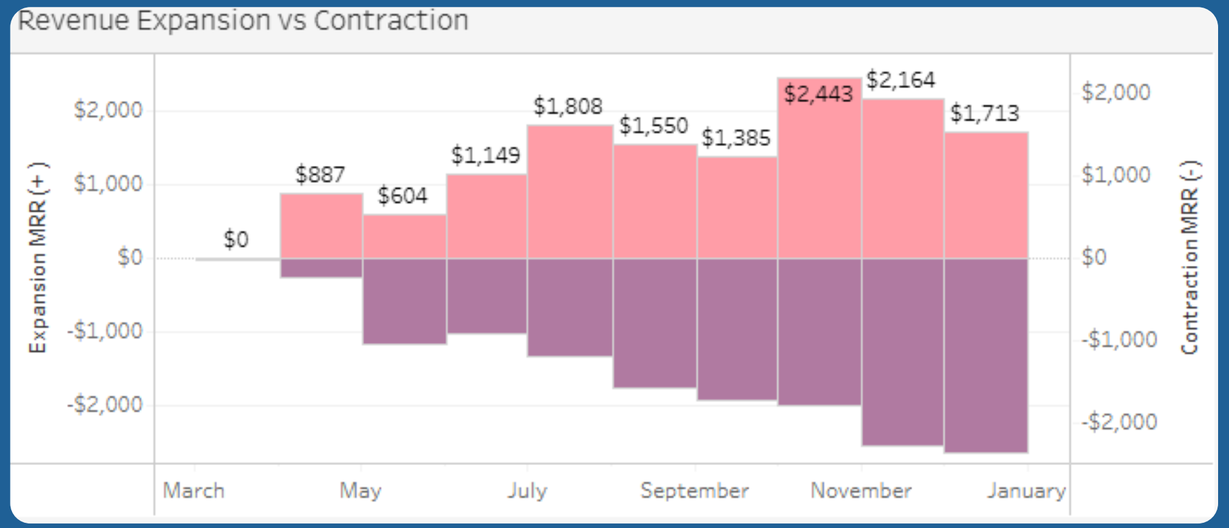
05

Expansion MRR

Revenue growth from existing paying users.

Contraction MRR

Revenue decrease caused by downgrades or reduced spending.



Key Observation

Growth momentum accelerated after mid-year.

Recommendation

Focus on retention campaigns and user engagement strategies.

Final Conclusion

06

Main Findings

- Revenue growth was supported by increasing paid users.
- Churn became the biggest revenue risk factor.
- Recovery revenue partially compensated churn losses.
- Expansion revenue remained positive but contraction pressure increased.

Business Recommendations

- Improve retention strategies
- Reduce churn with engagement campaigns
- Focus on high-value user segments
- Monitor expansion/contraction behavior monthly
